### Late 1965/1966 Convertible Trunk Weatherstrip Kit

This trunk seal kit is for all late 1965 and all 1966 Thunderbird Convertibles built on or after 2/15/65. If you are not sure of your production date, you can check the end of the five-foot pieces of rubber on either the package tray or flip tray. The early style kit pieces will have two metal tabs with screw holes on each end. The late style kits will have a threaded stud on each end of the five-foot pieces on the package tray and flip tray. Please check your car to be sure you have the right kit for your car as we cannot take back kits on which installation has been started.

Installation will require a phillips screwdriver, knife, pair of scissors and a tube of weatherstrip adhesive. We recommend 3M Super Weatherstrip Adhesive which is yellow in color.
